// ABOUT

Sound designer, composer and creative technologist with five years of professional experience in theater, museums, installations and media production. I combine artistic composition with strong technical skills: spatial and binaural audio, generative sound systems, interactive media installations, music production and mixing, and show control for live performance. I have worked for theaters, sound design studios such as idee und klang and audiobreeze, and artists such as Alexander Schubert, and have taught audio engineering at a vocational school.
